# SUMMARIES

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

gamma) can be used as a medicant, for preventing or treating septic shock, cachexia, immune diseases including multiple sclerosis and Crohn's disease and skin disorders including bullous, inflammatory and neoplastic dermatoses. The antibody is selected from a single chain antibody (scFv), a chimeric antibody or diabody comprising the humanised variable domain of the monoclonal mouse anti-IFN gamma antibody 19910; a multivalent antibody or a ruminant antibody. The antibodies are also useful for determining IFN gamma levels in a sample. Two fusion CDNA genes encoding heavy and light chain fusion proteins of the humanised D9D10 antibody were constructed. The light chain comprised cond human human immunoglobulin kappa light chain constant region. The heavy chain immunoglobulin kappa light chain constant region. The heavy chain

The sequences given in AAR41682-85 are encoded by the expression vector, pA44602. This vector contains open reading frames encoding the heavy chain variable region (VH) of the antibody 128.1, an ampicialin resistance gene and a histdine (histidinol) selection marker.

Transcription of the VH gene is from the VH promoter of the murine 27.44 gene. The vector also includes a heavy chain immunoglobulin enhancer and the human gammal constant region (CH). The VH region of 128.1 was isolated by polymerase chain reaction and cloned into plasmid pA4424. This was actieved by digesting the plasmid and the product with EcoRV and Nhel. The VH gene was inserted in-frame with the human gammal CH region CH at the 3' end of the VH-J region by means of a Nhel size. 128.1 is an anti-human transferrin receptor antibody which binds to the transferrin receptor on brain capillary endothelial cells. This antibody may be used in a conjugate in which it is linked to a neurophrevent neurological disorders 9. Drain tumours, AIDS, stroke, epilepsy, Parkinsons and Alzheimers disease. It may also be used for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 1 APELLGGPSVFLFPPKPKDTLMISRTPEVTCVVVDVSHEDPEVKFNWYVDGVEVHNAKTK 60

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          In humans, IgG1 may exist as either of two allotypes at site 1, 2 or 17. The inventor's propose eliminating these allotypes by amino acid changes to agree with the sequences of IgG2, IgG3 and IgG4. None of the allotype sites (1, 2 and 17) are located within the CH2 domain. New "isoallotypes" should be suitable for therapeutic use in all patients. See AAR27678-R27681.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ó;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention provides immunoglobulin E (IgE) antagonists comprising one or more of the FcepsilonRI receptor-binding determinant sites of human template antagonists include IgE variants comprising an immunoglobulin template and binding determinant sequences (bds) CDbds, EFbds and the sequence shown in AAY42581. The CDbds (CD loop binding determinant the EFbds (EF loop binding determinant asquence) are selected from the sequences shown in AAY42577 and sequences shown in AAY42578-Y42580. The variants are useful in raising and screening anti-IgE antibodies, in the isolation and purification of FcepsilonRI receptor and in the treatment and prophylaxis of allergic

This sequence represents the human immunoglobulin GI Fc region, and was used in creating a BZLF2-immunoglobulin Fc fusion protein (BZLFZ/FC).

BZLF2 is a Bpstein-Barr virus (BBV) protein. To create BZLFZ/FC, this sequence, the leader sequence of mouse interleukin-7 (IL-7) (see ARR87021), a Flag octapeptide (see ARR87022) and a flexible linker (see ARR87021), a Flag octapeptide (see ARR87022) and a flexible linker (see ARR87021). The BZLFZ/FC fusion protein containing this sequence (see ARR87020). The BZLFZ/FC fusion protein members of the C-type lectin family. The C-type lectin domain is found in type II membrane proteins. The BZLFZ protein is capable of binding the beta chain of a major histocompatibility complex (MHC) class II antipen. Fusion proteins with an oligomerishing zipper domain (OZD), instead of an immunoglobulin Fc region, can also be created. BZLFZ proteins inhibit antigen-specific antibody formation, proliferation of Exhibit superantigen-like activity. The proteins can be used for treating or preventing autoimmune diseases such as myasthenia gravis, multiple sclerosis and systemic lupus erythematosus. Also, for treating or preventing autoimmune diseases such as myasthenia gravis, also, and such and such and viral and systemic lupus erythematogus. Also, for treating or preventing autoimmune diseases and viral and viral
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö

The human IgG1 Fc region (AAW02305) can be used as a fusion partner for interleukin-17 receptor (IL-17R) proteins (see also AAW04184-85), allowing purification of recombinant IL-17R using protein A or protein G affinity chromatcography. Fusions between Fc and HY813 (see also AAW02387), a viral homologue of IL-17, and between Fc and murine CILA8 (AAW02386) were used to identify cells that were used as a source of murine IL-17R. Selected murine thymoma EL4 cells were used as a source of murine IL-17R cDNA (AAT33800).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        1 APELLGGPSVFLFPPKPKDTLMISRTPEVTCVVVDVSHEDPEVKFNWYVDGVEVHNAKTK 60

The BZLF2 protein is capable of binding to a beta chain of a Class II major histocompatibility complex antigen to inhibit an antigen-specific
                                                                                                                                                                                                                                                                                               Gaps
                                                                                                                                                                                                                                                                                                                         1 APELLGGPSVFLFPPKPKDTLMISRTPEVTCVVVDVSHEDPEVKFNWYVDGVEVHNAKTK 60
                                                                                                                                                                                                                                                                                                                                       The present sequence was used in the preparation of a synthetic construct containing the Epstein-barr virus (EBV) BZLF2 protein, which is capable of binding a beta-chain of a major histocompatibility complex (MHC) class II antigen. The protein can be used to inhibit antigen-specific antibody formation, peripheral blood monouclear cell proliferation and cytocoxic T-cell responses, e.g. in the prevention or treatment of autoimmune diseases, transplant rejection, allergies or asthma,
complex class II beta chain, useful for treating, e.g. auto-immune diseases or transplant rejection

IL-17R polypeptides have immunoregulatory activity. They can bused for inhibiting T cell proliferation, or for inhibiting T cell activation. In particular they can be used for preventing or treating organ or graft rejection, autoimmune disease, allergy or asthma. They can also be used for the prevention or treatment of inflammatory disease in which activated T cells play a role or for inhibiting B cell proliferation or immunoglobulin secretion. The IL-17 polypeptides can also be used as immunogens, reagents in in vitro assays, or as binding
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   T cell proliferation; T cell activation; organ; graft; rejection; autoimmune disease; allergy; asthma; treatment; inflammatory disease; B cell proliferation; immunoglobulin secretion; immunogen; IgG1; Fc.

response. BZLF2 is useful for inhibiting antigen-specific antibody formation, the proliferation of blood monourclear mononuclear cells, and cytotoxic T cell responses. BZLF2 is also useful for inhibiting undesirable antigen specific responses, e.g. in the treatment or prevention of asthma; for preventing or treating autolmmune disease; and for preventing tissue or organ transplant rejection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      1 APELLGGPSVFLFPPKPKDTLMISRTPEVTCVVVDVSHEDPEVKFNWYVDGVEVHNAKTK 60

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention relates to a novel receptor that binds Interleukin (17.11-7), also known as CTLA-8) and a Herpesvirus saimiri homolog, HVS13. The receptor is a type I transmembrane protein which is referred to as IL-17R. Murine thymona EL4 cells were found to express a receptor for IL-17. An EL4 mammalian expression library was screened conditions a cDNA encoding the receptor was identified (see AAA61238). The CDNA was used to isolate DNA encoding human IL-17R by cross species hybridisation. The human IL-17R cDNA and protein are described in that may be used with IL-17R to make a fusion protein. Soluble forms of the receptor may be used to regulate immune responses, for example to suppress rejection of organ grafts. Antibodies to IL-17R consisting of amine all 1322 of murine IL-17R of human IL-17R may be used used in affinity purification of the receptor.

Suppressing rejection of a grafted syngeneic or allogeneic organ or tissue in a graft recipient involves transfecting the organ or tissue to be transplanted with DNA encoding soluble IL-17R, so that expression of IL-17R by the engrafted organ or tissue results in suppression of rejection. Soluble IL-17R imments comprise residues 1-320 of the murine IL-17R, residues 1-320 of the human IL-17R, and fragments of the extracellular domain that bind IL-17. The method is useful for regulating an immunoresponse,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           suppressing rejection of grafted organs or tissues in the recipient
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            IL-17R; interleukin-17 receptor; soluble; CTLA-8; Herpesvirus saimiri; HSV13; graft rejection; suppressor; immunosuppressive; anti-allergic; anti-asthmatic; immunoglobulin G1; Fc region.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             A novel interleukin-17 receptor (IL-17R) was identified by screening a binding fusion proteins comprising human immunoslobulin of (19G1) Fc region and soluble IL-17 (CTLA-8) protein or a homologous Herpesvirus saimiri (HSV) protein, designated HSV13. Regulating an immune or inflammatory response in a mammal comprises administering soluble IL-17R. Soluble IL-17R fragments comprise residues 1-322 of the murine IL-17R, residues 1-320 of the human IL-17R, and fragments of the extracellular domain that bind IL-17. The method is useful for regulating
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  an immunoresponse, for treating or preventing diseases like allergy, asthma and autoimmune diseases, and for suppressing rejection of grafted

A soluble IL-17 protein (CTLAB) and a herpesvirus similar (HVS13) open reading frame (homologous to CTLAB) were expressed as fusion proteins comprising an immunoglobulin Fc region, and used to screen for the expression of the IL-17R. The screening identified the novel receptor of the invention. IL-17R. The screening identified the protein that exhibits antiinflammatory, immunosuppressive, antiasthmatic and antiallergic activities, and is an inhibitor of T cell proliferation and activation. IL-17R can be used to regulate immune functions, and is useful for preventing or treating organ or graft rejection, autoimmune disease, allergy or asthma. The present sequence represents the Fc region of human immunoglobulin G1 (1961). This fragment of 1961 forms part of the IL-17 fusion protein used to identify IL-17R.
                                                                                                                                                                                                                                                                                                                                                                                                                                                 Interleukin-17 receptor protein useful for regulating immune functions and for preventing or treating organ or graft rejection, autoimmune disease, allergy or asthma in human \,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                               US-09-674-857-8

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 δy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ò
                                                                                                                                       A; Molecule type: protein
A; Residues: 1-289 CFRA>
A; Note: the molecule is a dimer linked by 12 disulfide bonds; it has an extra interchain
A; Note: this protein lacks most of the V region and all of the CH1 region. Residue 12 cd
A; Note: the sequence of residues 42-76 was taken from the reference that follows
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               A.Wolfensteines at positions 24, 27, 33, 39, 42, 48, 54, 57, 63, 69, and 72 form inter Blacken.
